

Moritz Roessler  
Senior Fullstack Developer

I'm a 32-year-old software developer from Germany. My favorite language is without a doubt **TypeScript**. It's the language I grew up with, learning to code and still love to use on a daily basis 11 years later. I'm really happy to see the language evolve, driven by the community, and see tools like Babel grow from an experiment to the leading standard for transpiling JavaScript. I have about 11 years of in-depth knowledge in JavaScript and can handle complex tasks like writing a compiler. I spent about 7 years on Node.js and have experience with a variety of frameworks like Redux, Babel, React, MUI, Jest, etc... React is definitely my favorite framework of the last years and has been what kept me fascinated over the past years. I have experience working with experienced remote teams of senior developers in an agile environment using Scrum. I value code quality over quantity and am experienced in working with and maintaining a high-quality codebase. As a team we leverage unit tests, end-to-end tests and visual regression tests to assure quality and reduce the workload of QA. As with most experienced scrum teams, staged environments, CI/CD pipelines, and thorough code review are a standar. I love to code, and I highly appreciate quality code. I prefer TypeScript over JS because type safety is a valuable tool to vastly reduce the chance of introducing bugs. I'm used to restrictive ESLint rulesets and formatters. I'm well familiar with Git and Docker and use both on a daily basis. I'm used to conventional branching models. I have experience writing serverless applications on AWS (Lambda) and DynamoDB. I love writing code. From code-golfing and king-of-the-hill battles over crypto trading bots to processing high-frequency real-time sensor data or doing sophisticated statical software analysis. I like to experiment a lot, so most of my projects don't make it past a proof of concept stage as the last 20% are usually the most time-consuming. I spent the last two years working with analyzing and processing high quantities of real-time data (about 1.5M data points/day) and the problems that arise trying to analyze that amount of disjoint data. I'm currently developing a server-side framework that brings React to the server side and allows you to develop modular, prodution-grade backend components.

## Find out how to profit from my experience.

At 85% productivity.

## Expected Benefits

€ €100.00K  
Salary

House 100% Remote  
Homeoffice

## Education

2012 - 2015

FIAE at Walther Rathenau

2001 - 2009

Fachhochschulreife at Kepler Gymnasium

## Work History

May 2012 - Mar 2015

FIAE at **Bechtle**

Germany - Freiburg

JavaScript Java LotusScript Lotus Notes  
Domino Git

Mar 2015 - Mar 2016

Junior Software Engineer at **Bechtle**

Germany - Freiburg

LotusScript Lotus Notes Domino Basic  
Git

May 2016 - Apr 2017

Living abroad in Chile at **Arboleda Emaluisa**

Chile, Temuco

JavaScript TypeScript React MUI  
Git

May 2018 - May 2019

Junior Software Engineer at **Bechtle**

Germany - Freiburg

C# Perl Git

Jan 2020 - Dec 2021

Software Engineer at **Spoor**

Germany - Denzlingen

JavaScript Node.js PostgreSQL Git Vue  
Docker Kafka Kubernetes

Feb 2022 - Jul 2022

Senior Frontend Developer at **Cosuno**

Portugal - Braga

TypeScript GraphQL React Git

Sep 2022 - now.

Senior IT Developer at **Digitas Pixelpark**

Germany - Freiburg

React Next.js TypeScript  
GraphQL JavaScript Git Scrum  
Coremedia ESLint

Jan 2025 - ?

Senior Fullstack Developer at your company

Europe (probably Germany)

An optimizing ES5 compiler, written in JavaScript. Definitely my all-time...

...favorite project. Just the right complexity for my first project. I learnt a lot about static software analysis along the way. It compiles jQuery and Angular.js and is able to render a visual representation of the CFG of jQuery. It can transform full ES5 AST's into CFG's and perform dataflow analysis on the computed CFG. A fork of the project is also able to compute concrete interpretations of any point P in the program. This can be used to statically derive the value of any variable at any point in the program. e.g. the value of a variable in the middle or at the end of a loop. The only optimizations that I implemented were size optimizations. e.g. uglifying or pretty-printing the code. SSA and loop unrolling have been implemented experimentally but not finished. Overall this was a good learning experience and I would love to work on another compiler some day. On a side note: I wrote this before Babel existed and was in the middle of adding an ES6 parser that compiles back to ES5. I dropped the project when Babel came out. It works pretty similar. Even the computed AST looks very similar.

## Online CV

Website

I haven't read many technical books so far.

## Achievements

In this section I want to share valuable findings and learnings. Things I have learned from my own experience and from the experts in the field. Each of these items represent a key experience or insight that I have gained from my work as a software developer. Some of them are just to mention that I learnt to do a specific thing.

### Nov 2023: Sticky scrollable tableheader

Sticky scrollable headers require JavaScript but are easy to implement in React.

### Sep 2023: I'm a senior dev.

Working together with other senior developers in the field, I can confidently say that I have reached around the same level of knowledge on modern web development than other seniors with an experience of 10-15 years.

### May 2023: My first framework.

Properly launching and marketing a product is a huge effort and requires continuous and consistent work to achieve results.

### May 2022: Medium Data!

Analyzing hundreds of millions disjoint data points requires careful planning, data architecture and intermediate SQL skills.

### ★ Dec 2013: Compiler for a mature language.

The first time my compiler compiled itself was a revelation. The first time it compiled jQuery was a delight.
